VIA Motors has developed the first extended range electric powertrain capable of replacing the V8 engine. It was my great privilege to introduce the Chevy Volt, and it is a great honor to introduce the world's first line of eREV Trucks, Vans and SUVs by VIA Motors.

—Bob Lutz
Father of the Chevy Volt

eREV

Extended Range Electric Vehicle

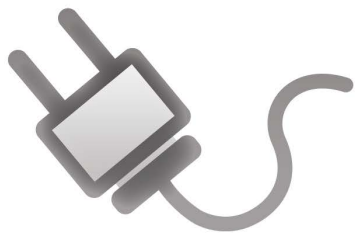

What's an eREV?

It's an extended range electric vehicle.

A small gas-powered generator automatically
recharges the batteries on the go.

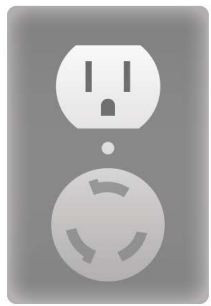

Plug it in

Charge in as little as 3 hours.
It only costs about 60 cents
per equivalent gallon of gas
on average.

Or gas it up

Nowhere to plug in?
Just use gas.
You'll still get the fuel
efficiency of a hybrid.

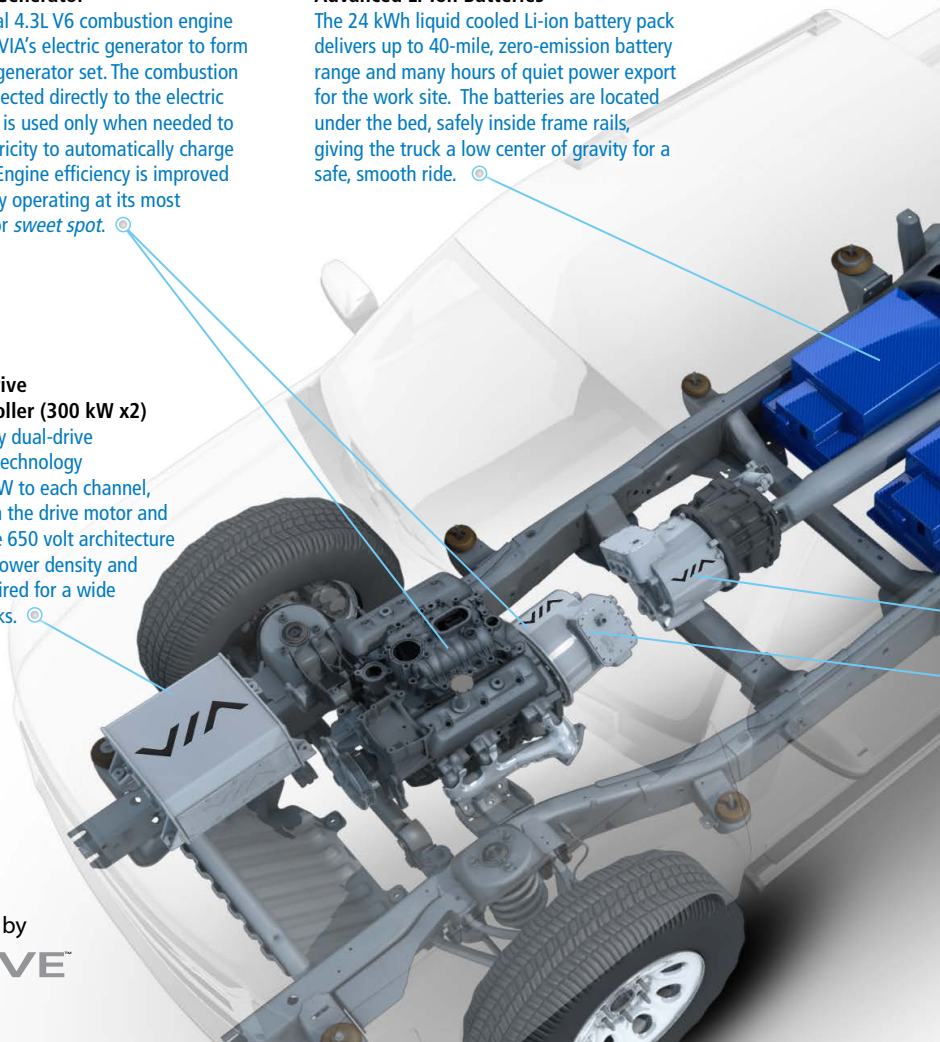

With power export

It’s like having a
tow-behind generator
for electricity wherever
you need it.

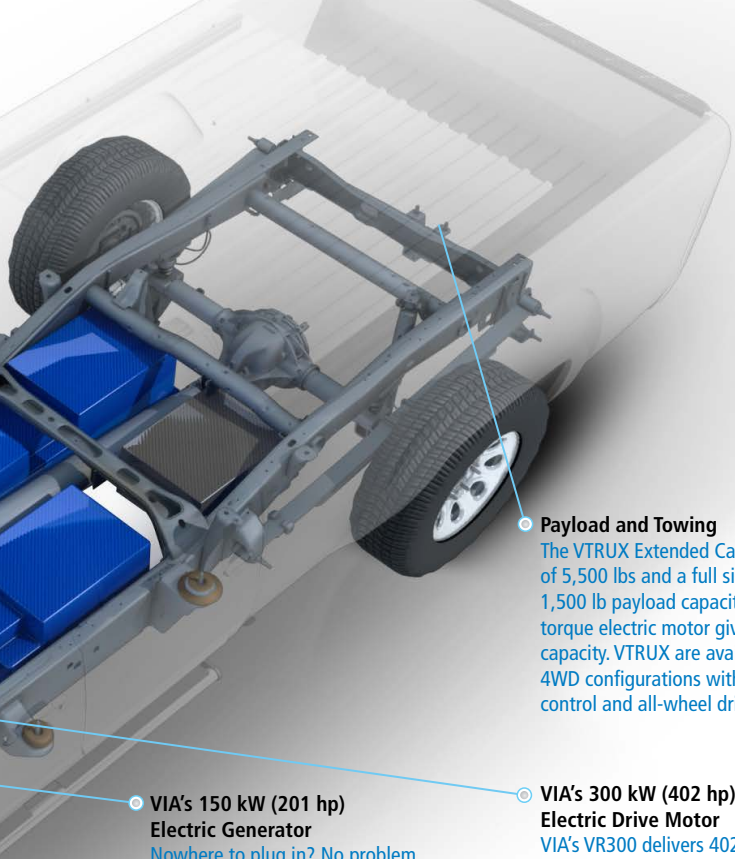

Gas/Electric Generator
The economical 4.3L V6 combustion engine is paired with VIA's electric generator to form a gas/electric generator set. The combustion engine is connected directly to the electric generator and is used only when needed to generate electricity to automatically charge the batteries. Engine efficiency is improved dramatically by operating at its most efficient rpm or *sweet spot.*

Advanced Li-Ion Batteries
The 24 kWh liquid cooled Li-ion battery pack delivers up to 40-mile, zero-emission battery range and many hours of quiet power export for the work site. The batteries are located under the bed, safely inside frame rails, giving the truck a low center of gravity for a safe, smooth ride.

VIA's Dual-Drive Motor Controller (300 kW x2)
The proprietary dual-drive liquid-cooled technology delivers 300 kW to each channel, powering both the drive motor and generator. The 650 volt architecture provides the power density and economy required for a wide variety of trucks.

Powered by VDRIVE™

Payload and Towing
The VTRUX Extended Cab has a curb weight of 5,500 lbs and a full size bed; delivering a 1,500 lb payload capacity. The 402 hp high-torque electric motor gives ample towing capacity. VTRUX are available in 2WD and 4WD configurations with automatic traction control and all-wheel drive technology.

VIA's 150 kW (201 hp) Electric Generator
Nowhere to plug in? No problem. VIA's VR150 electric generator delivers enough power to recharge batteries quickly and efficiently while driving. The 150 kW electric generator also provides exportable power for the work site and can power your entire home in an emergency.

VIA's 300 kW (402 hp) Electric Drive Motor
VIA's VR300 delivers 402 hp in an extremely small, light package. This compact high power motor weighs just 108 lbs, measures only 11"x 11" and delivers over 400 Nm (300 ft-lbs) of torque. Low maintenance, durability and long life make the VR300 the ideal power plant for a work truck.

402 hp

VIA
ELECTRIFIED
eREV

VIA's eREV powertrain is powerful enough for a variety of light trucks, SUVs and delivery vehicles

The first production offering is an extended-cab truck for fleets, with 4WD truck, SUV and van production to follow.

VIA's eREV powertrain is available for licensing. It is suited for a variety of large trucks, with 4WD options available.

VIA

Road Trip Ready

Say good-bye to "range anxiety." VIA's new eREV trucks drive up to 40 miles on batteries then continue up to 350 miles, generating their own electricity using a fuel-efficient onboard generator or "range extender."

VR150 Generator

Dual-Drive Motor Controller

Charge batteries on the go

The proprietary dual-drive liquid-cooled controller technology powers both the drive motor and generator. VIA's VR150 electric generator delivers enough power to recharge batteries quickly and efficiently, even while driving.

Exportable power for the work site

The VTRUX power export module option provides 15 kW at 30 amps of onboard mobile power. A utility grade output module, now in development, is designed to provide 50 kW of mobile emergency power to keep critical facilities online. With nearly $50,000 worth of mobile power built into VIA's work truck, some fleet customers say, "It's like getting a free truck with a generator!"

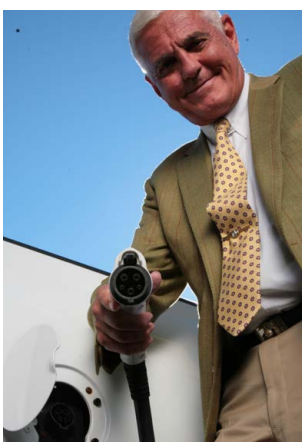

Power where you need it

Power In

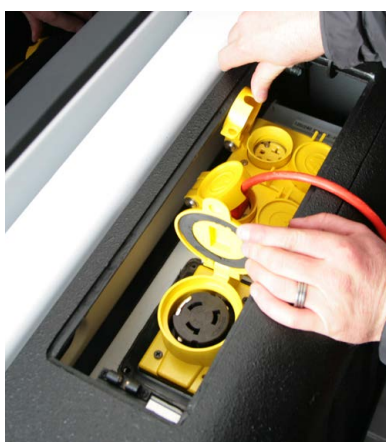

Use a standard charging station, or charge conveniently at home using a standard 110 or 220 volt outlet.

Power out

Power where you need it—at home or the workplace. 120 and 240 volt outlets right on the back of the truck provide easy access for work or emergency. Now you can plug your *house* into your *truck* in an emergency!

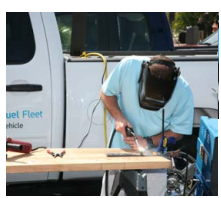

Charge with 120 volt, 240 volt or a charging station

Onboard 120 & 240 volt outlets 15 kw @ 30 amp

Work site power

Enough power to run an arc welder all day

Monthly Energy Review, 2une 2011

Weekly U.S. Midgrade All Formulations Retail Gasoline Prices

Projected Gasoline Prices

Some customers will save thousands of dollars per year

Estimating price of gas

Experts estimate that if gas prices continue to rise at their 15-year historical trend, the estimated average price of gas over the next 8 years will be over $5.34.

Estimating cost of electricity

The cost of electricity is based on the industrial national average rate which also closely tracks with "off peak" or EV consumer rates. Average cost of electricity for night-time charging at the industrial rate is $0.065 per kWH. For example: The extended cab VTRUX travels on average 2 miles per kWH. Using the average retail rate for electricity of $0.10 per kWH, the truck uses $.05 a mile.

Maintenance savings

Due to the infrequent use of the gas engine, engine wear, service and maintenance are expected to be significantly reduced resulting in 3 times less engine maintenance costs. Due to the use of regenerative braking, (slowing down the vehicle by generating electricity using the electric motor) brake service intervals should increase by 3 times resulting in lower brake maintenance costs.

Transmission, alternator and other high-wear parts have been removed, resulting in fewer service and replacement costs. This reduced maintenance allows the VTRUX a lease life of 8 years. The formula above assumes a new lease of a new stock truck starting in year six for the conventional gas version.

Estimated VTRUX Draft Specs

All Electric Range	40 miles (Truck) 35 miles (SUV ,Van)
Combined Range	400 miles
Drive	2WD or 4WD
Traction Motor Power	300 kW peak 175 kW continuous
Traction Motor Torque	400 Nm peak 210 Nm continuous

@ 35 miles	Battery only
@ 50 miles	67 mpg
@ 60 miles	48 mpg
@ 100 miles	30 mpg
@ 200 miles	24 mpg

VIA
VTRUX
ELECTRIFIED
eREV40

VIA Motors is a privately held electric vehicle development and manufacturing company. VIA has developed a proprietary 650-volt eREV drive system technology designed for full size trucks and SUVs called the VIA VDrive™. VIA employs a streamlined second stage manufacturing process to integrate its proprietary eREV powertrain technology into new OEM vehicles it calls VTRUX™. VIA VTRUX deliver up to 40-mile EV range and up to 400-mile extended range, averaging over 100 mpg in typical daily driving. VIA plans to sell directly to fleets, and then later to consumers.
